Cutler-Hammer® Single Meter Sockets

Product Focus

A one-source solution for all your electrical infrastructure needs

The Market

The residential building industry has experienced phenomenal growth over the past 5 years, topping new housing start numbers month after month. For every house that is built, utilities rely on single meter sockets or meter breakers as a means to supply and monitor power usage. More and more utilities are moving away from providing meter sockets for their customers. That means electrical contractors need to purchase the meter socket with the rest of the home's electrical infrastructure at distributors or supply houses. With countless utilities across the country, each with their own requirements and specifications, the variety and number of single-family home metering devices needed is expansive.

Product Offering

Eaton offers a comprehensive line of single meter sockets and meter breakers that are utility approved in markets across the country. With hundreds of utility

approvals existing and new ones being added all the time, Eaton has the right metering device for your market.

In addition to single-family home metering devices, Eaton also offer a complete selection of multi-metering devices.

Feature, Functions, and Benefits

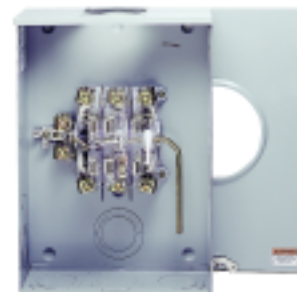

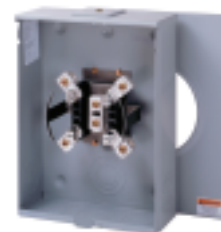

Eaton single meter sockets have all the features you need:

- Single Phase or Three Phase
- Ring or Ringless
- 5th Jaw
- Underground or overhead
- 100, 200 and 320 amp ratings
