

Automatic Splices and Dead-Ends

Blackburn® ATS Autoset™ Automatic Splices

Make quick, dependable overhead tension splices and speed up installation time

Blackburn® automatic splices make fast and dependable overhead tension splices that take a bite out of installation time. The conductor simply slips into the colour-coded, funnel-shaped end pieces and automatically enters the pilot cup with a gentle push. The pilot cup guides the conductor past the unique serrated jaws and into the center of the connector. When the conductor meets the center stop, the pull-back locks it into position as the jaws firmly clamp down. The more pull, the more bite, which provides an instant, positive and automatic connection.

- Colour provides instant visual identification of maximum conductor size. Funnel swiftly guides conductor into position for insertion.
- Envelop cable strands and guide the conductors into the center of the splice
- Provide optimum contact area for a greater range of conductor sizes
- Positions the jaw for positive conductor acceptance
- Automatically determines proper insertion length of both conductors
- Covers the connection for superior corrosion protection and long-lasting durability
- Enables identification of the minimum conductor size of wide-range connectors – it further eliminates errors and speeds up installations

* Application limited to maximum 10,000 lb. tensile.

Automatic Splices and Dead-Ends

Blackburn® ATD-ZB Stainless Steel Bails

This dead-end installs quickly and easily, reducing maintenance costs and inventory.

- Colour provides instant visual identification of maximum conductor size
- Funnel swiftly guides conductor into position for insertion
- Envelops cable strand and guides the conductor into the center of the splice
- Provides optimum contact area for a greater range of conductor sizes
- Positions the jaw for positive conductor acceptance
- Coats the jaws and tube's inner diameter, seals the connection and provides a high-pressure lubricant for long-term, continuous performance
- Repel dirt and debris
- Dead-end ACSR, AAC and AAAC conductors
- Breaking strength exceeds 95% of conductor's rated strength, up to a maximum of 10,000 pounds
- Both parts are included and enable the bail to be used with standard dead-end suspension insulators
- Enables identification of the minimum conductor size of wide-range connectors – it further eliminates errors and speeds up installations

Automatic Splices and Dead-Ends

Blackburn® ATDG™ Guystrand Connectors for Steel Strand Applications

Installation made easy – no tools required

- Built tough. The connectors can handle tensile loads in excess of 90% of the rated strength of the recommended strand.
- What's more, they exceed 90% of the strand rated breaking strength
- Both eliminate incorrect insertions
- Enables jaw adjustment for repositioning, removal or retensioning of strand (dead-ends)
- Cartridge, jaws, spring and washer are coated for long-term, continuous performance and they are corrosion-resistant

Steel Strand Automatic Dead-Ends

These steel strand automatic dead-ends are designed and recommended for use on:

- Common grade
- Siemens-Martin
- High-strength utility grade
- EHS
- Galvanized
- Bethalume
- Aluminized steel strand (per ASTM A 474, A 475)

Cat. No.	Type	Strand Nominal Diameter in. (mm)	Strand†		Dimensions in. (mm)
