## **Sensor Technologies**

# Passive Infrared (PIR) Technology

- Designed to detect motion from a heat-emitting source (such as a person entering a room) within its field-of-view and automatically switch lights ON and OFF.
- PIR sensors are considered line-of-sight sensors, meaning that the sensor must be able to have a direct line-of-sight to the person making the motion.

# Ultrasonic (US) Technology )))

- Ultrasonic sensors use the Doppler Principle. These sensors produce low intensity, inaudible sound an detect changes in sound waves caused by motion.
- They are volumetric in nature and therefore not line-of-sight dependent.
- They are much more sensitive to smaller motions.

# Dual Technology ( )))

- Dual Technology is the combination of PIR and Ultrasonic into one sensor and is the ultimate sensing solution available today.
- This pairing helps to eliminate false activations (both ON and OFF) thus saving additional energy use.
- Dual Technology sensors ensure the greatest sensitivity and coverage for tough applications without the threat of false triggers.

When enabled, the Daylighting feature (-R/MV/DMV Units only) prevents lights from turning ON when the room is adequately illuminated by natural light.

- Full Logic Mode (-R Units Only) should the ambient light level exceed the preset foot-candle level, the lights turn OFF. The lights will remain OFF until the ambient light level falls below the set point.
- Half Logic Mode If the amount of natural light available rises above the setpoint, the daylight sensor will not turn the lights OFF wile occupancy is being detected.

### **Surge Protection**

• The device can withstand surges up to 6KV without getting damaged, resulting in longer lifespan.

## **Color Change Kits**

Color change kits come with three interchangeable color faceplates. This allows the device color to be changed in the field, offering design flexibility within one product.

Light Almond, White, Ivory

C5 Color Kit Black, White, Gray

Energy costs and consumption continue to rise in the United States. Today, many energy codes and energy policies either require or incentivize the use of energy efficient lighting controls on commercial projects.

NOTE: This document is intended to provide a brief overview and design professionals should consult the appropriate standards documentation, and authority having jurisdiction, for project-specific requirements and interpretation

## **ANSI/ASHRAE/IES Standard 90.1-2016**

Commonly known as ASHRAE 90.1, this standard is recognized by the U.S. Department of Energy (DOE) as the national energy reference standard. This code significantly fine-tunes the design requirements for code-compliant lighting controls systems, mechanical systems, and the building envelope.

## **International Energy Conservation Code (IECC) 2015**

This standard establishes minimum energy efficiency requirements for new and renovated buildings. ASHRAE 90.1 is recognized by the DOE as the national reference standard; however IECC is adopted by many states.

### California Title 24

These are California's Building Energy Efficiency Standards for new construction of, and additions and alterations to, residential and nonresidential buildings.

	Energy Code Section								
Top Energy Code Requirements	ASHRAE 90.1 (2016)	IECC (2015)	Title 24 (2016)						
Local Control	9.4.1(a)	C405.2.2.3	130.1(a), (b)						
Manual ON	9.4.1.1(b)	C405.2.2.3	130.1(a), (b)						
Partial Automatic ON	9.4.1.1(c)	C405.2.1.1	130.1(b)						
/lulti/Bi-Level Lighting	9.4.1.1(d)		130.1(a)						
ylighting Side Lighting	9.4.1.1(e)	C405.2.3.2	130.1(d)						
aylighting Top Lighting	9.4.1.1(f)	C405.2.3.1	130.1(d)						
Automatic Partial OFF	9.4.1.1(g)	C405.2.1.2	130.1(c).6						
Automatic Full OFF	9.4.11.1(h)	C405.2.1.1	130.1(c).5						

#### **Local Control**

The lights can be turned ON/OFF locally

The lights can be turned ON only through manual operation; auto-ON is restricted

### Partial Automatic ON

The lights can be turned ON automatically, when occupancy is sensed, only at a power level less than or equal to 50%

### Multi/Bi-Level Lighting

At least one control step is provided between 30% and 70% power levels

## **Daylighting Side/Top Lighting**

Electric lighting is controlled when side/top daylight is available

The light level will be reduced, when no occupancy is detected over a period

#### Automatic Full OFF

The lights will turn OFF, when no occupancy is detected over a period
